

response of the large-scale structure of the atmosphere to ... - quarterly journal of the royal meteorological society q. j. r. meteorol. soc. 00: 1 (2000) response of the large-scale structure of the atmosphere to global warming **impact of leaf area index seasonality on the annual land ...** - seasonality on the annual land surface evaporation in a global circulation model bart j.j.m. van den hurk1, pedro viterbo and sietse o. los2 research department november 2002 1 royal netherlands meteorological institute, de bilt, the netherlands 2 university of ... **the atmospheric ocean: eddies and jets in the antarctic ...** - the atmospheric ocean: eddies and jets in the antarctic circumpolar current by andrew f. thompson department of applied mathematics and theoretical physics centre for mathematical sciences university of cambridge wilberforce road cambridge cb3 0wa uk although the antarctic circumpolar current (acc) is the longest and strongest oceanic current on earth and is the primary means of inter-basin ... **the role of the sun in atmosphere-ocean coupling**- the role of the sun in atmosphere-ocean coupling ... global circulation. moreover, the relatively weak, direct radiative forcing of the solar cycle in the upper strato- sphere can possibly lead to a large indirect dynamical response in the lower atmosphere through a modulation of the polar night jet, as well as through a change in the brewer dobson circulation (bdc) (kodera and kuroda, 2002 ... **formation of layers of methane in the atmosphere of mars ...** - Iroyal belgian institute for space ... circulation model for the atmosphere of mars show that surface emissions of methane can result in a highly nonuniform vertical distribution throughout the atmosphere, including the formation of layers, during the first weeks after the release. the fate of the released methane is determined by the global circulation pattern at the time of the release, and ... **subscale forcing in a global atmospheric circulation model ...** - atmosphere), which represents a dynamical core with linear diabatic heating and friction. the subscale forcing is the subscale forcing is determined for a low wave number resolution (5) embedded in (42) resolution (2.5) using **radioscience experiments to monitor atmospheric angular ...** - assimilated into the mars global circulation model that is in use at the university of oxford and at the open university in the uk-lmd-mgcm, covering almost three year (my) 24 through 82 degrees solar longitude in my 27. **climate change evidence and causes (pdf) - delss** - an overview from the royal society and the us national academy of sciences climate change evidence & causes. 2 climate change summary
It is now more certain than ever, based on many lines of evidence, that humans are changing earth's climate. the atmosphere and oceans have warmed, accompanied by sea-level rise, a ... **addressing model error through atmospheric stochastic ...** - the finite resolution of general circulation models of the coupled ocean system and the effects of eddy atmosphere-sub-grid scale variability present a major source of uncertainty in model simulations on all time scales. **geodetic effects of the ocean response to atmospheric ...** - geodetic effects of the ocean response to atmospheric forcing in an ocean general circulation model o. de viron royal observatory of belgium, brussels, belgium **predictions of future climate change in the caribbean ...** - using global general circulation models ... (26.5°C), the atmosphere becomes the principal modulator of the thermal convection by means of the vertical wind shear (vws) (taylor et al., 2002). giannini et al. (2001a), chen and taylor (2002), and kingse et al. (2001) define the vws as the difference between the horizontal wind speed in the upper troposphere at 200 mb *correspondence to ... **new a level subject content overview - rgs** - dr. sylvia knight is head of education for the royal meteorological society. as a meteorologist, ... the large scale movements of the atmosphere, or global atmospheric circulation, along with ocean circulation, distribute energy about the globe. whereas individual weather systems are difficult to predict, the average circulation of the atmosphere remains relatively constant over time. this ...
